HarvardX / edX · certificate pending

// SUMMARY

Third-year Computer Science student building production-style full-stack applications outside the classroom, including a bilingual marketplace platform, a role-based academic advising system, and an e-commerce project in progress. Comfortable across the stack, from REST API design and authentication to responsive front-end interfaces. Actively strengthening data structures and algorithms through regular problem-solving practice.

// PROJECTS

GULIT — Bilingual Market Price Management System

live · github.com/natty-fe/Gulit.github.io

- Built a marketplace platform digitizing a paper-based traditional market: regulated pricing, approved-shop listings, order tracking, and delivery workflows.
- Designed a Node.js/Express REST API with a clean MVC structure, supporting five distinct user roles with role-based authorization.
- Implemented JWT authentication, bcrypt password hashing, and transactional email (welcome messages, token-based password reset) via Resend, on PostgreSQL/Supabase.

Student Academic Advisor System

github.com/natty-fe/Student_service.github.io

- Built a browser-based advising tool that tracks completed and planned courses, estimates current and expected GPA, and checks prerequisite readiness.
- Implemented a course recommendation engine with three modes (best fit, easiest, fastest degree progress) and graduation-eligibility prediction with workload/conflict checks.
- Built a local, context-aware chat assistant answering questions about the student's own GPA, prerequisites, and graduation status.

AI Study Assistant (backend mostly complete, frontend in progress)

github.com/natty-fe/AI-study-assistance

- Building a RAG-based study assistant: FastAPI backend with JWT auth, PostgreSQL, and S3-compatible storage (MinIO) for uploaded PDF, PPTX, and DOCX files.
- Implemented an async pipeline (Celery + Redis) for document parsing, semantic chunking, OpenAI embeddings, and hybrid retrieval (Pinecone + BM25 with Reciprocal Rank Fusion).
- Implemented GPT-4o powered chat, summaries, quiz generation, and flashcard export; Next.js/TypeScript frontend in progress.

Bazar — E-Commerce Marketplace

in progress

- Currently developing a full-stack e-commerce marketplace application, focused on product browsing, cart management, and order flow.
